Center for New Media Networking Event
Oct 14 3-5PM 14ᵗʰ Floor of NW Building

This event is a networking opportunity to showcase research and issues related to Human-in-the-Loop technology across the campus. The first hour features lightning talks from researchers throughout Columbia. The second hour is a roundtable discussion to discuss and identify a concrete set of grand challenges for the Center for New Media.

Data science is relevant to all disciplines, but raises different issues in different fields. What are some of the most challenging questions today that best addressed and explored and perhaps answered through data?

(Data+Media): Humans in the Loop
Speaker Series

New York City is the most creative city in the world. Increasingly, human creativity is enhanced by data-intensive algorithms and technologies. "Humans-in-the-loop" has the potential to massively accelerate the speed and scale that content is created, delivered, and consumed.

(Data+Media): Humans in the Loop is a speaker series on how technology enhances how humans create, consume, and understand creative, artistic, and civic expression across all forms of media.   Organized by the Center for New Media.
